

# Important DOCKER Commands

## Important Docker Commands

### 1. Check Version / Info

- docker --version
- docker info

### 2. Image Commands

- docker pull
- docker images
- docker rmi
- docker search

### 3. Container Run

- docker run
- docker run -d
- docker run -d -p host:container:container
- docker run --name

### 4. Container Management

- docker ps
- docker ps -a
- docker stop
- docker start
- docker restart
- docker rm

### 5. Logs & Shell Access

- docker logs
- docker logs -f
- docker exec -it bash
- docker exec -it sh

### 6. Build Image

- docker build -t .
- docker run -d -p host:container --name

### 7. Volumes

- docker volume create
- docker volume ls
- docker run -v ./path:/path
- docker volume rm
- docker volume prune

### 8. Networks

- docker network ls
- docker network create
- docker run --network
- docker network rm

### 9. Cleanup

- docker system df
- docker system prune
- docker system prune -a

### 10. Inspect & Stats

- docker inspect
- docker stats
- docker top
